***Detailed Action***

***Allowable Subject Matter***

1. The following is an examiner's statement of reasons for allowance: the closest prior art, US 5,354,611 to Arthur et al teach a polymeric matrix containing inorganic particles (Abstract). The inorganic particles comprise 1st and second particles. The first particles are microspheres that can be from 10% to 70% by volume of the composite material (Col 2, lines 59-60). Arthur et al use a fluoropolymer matrix which is essentially a thermoplastic material (Col 1, lines 55-56). Arthur et al teach away from using a crosslinking material since such materials have no utility in circuit board construction when used as a matrix having dielectric capabilities due to the inability of crosslinking material to re-soften on application of heat. Circuit boards must be able to withstand the tensile/torsional stresses associated with rapid cooling and heating cycles when in operation. Crosslinked polymeric materials are not as pliable as thermoplastic polymers and have a greater chance of cracking due to thermal cycling.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Prior Art of Record***

2. The prior art of record and not relied upon is considered pertinent to Applicant's disclosure. In addition, the following references are cited for disclosing various aspects of Applicant's invention:
